Abstract

A self-adhesive sheet for bonding and residueless detachment of a floor covering, especially a carpet, to and from a floor, especially parquet, having a 5 backing layer made of polymer film. The backing layer is coated on a top surface facing the floor covering and on a bottom surface facing the floor with a pressure-sensitive adhesive coating. The top surface optionally has a textile structure. The pressure-sensitive adhesive coatings have a different adhesive strength on the two surfaces such that the pressure-sensitive adhesive coating and/or the adhesive 10 strength on the bottom surface is a fraction of that on the top surface and at least on the bottom surface, the adhesive coating has a planar or substantially planar design.
